

FENERSOL

**SOLUTIONS AND SERVICES
FOR THE FUTURE
IN ONE HAND**

The European energy market has been transformed progressively over the past years and has forced all market participants to rethink the classic energy solutions. As a response to the new challenges, Fenersol Ltd. offers to its customers a wide spectrum of innovative energy solutions.

Through our services, we are among the earliest to respond to market trends and provide them timeless solutions.

Our and our partners' exceptionally wide range of activities includes energy consulting and project management, energy trading and power plant regulation, production management, industrial electronics, energy storage and wholesale of energy services. Regarding these services, one of the prominent elements of our partnership is the virtual power plant (VPP), which is several independent smaller energy-producing or storage devices pooled together to serve the electricity grid and to operate on ancillary service market. Consequently, it realizes a highly efficient, flexible and economical energy production technology, that also includes balancing energy services.

Our collaboration includes engineering, mathematics and economics degrees and has several decades of professional experience. This professional experience and professional background make our company almost unique in the Hungarian energy service market, thanks to which the services we provide fully cover the residential and small business sectors, as well as the industrial sector.

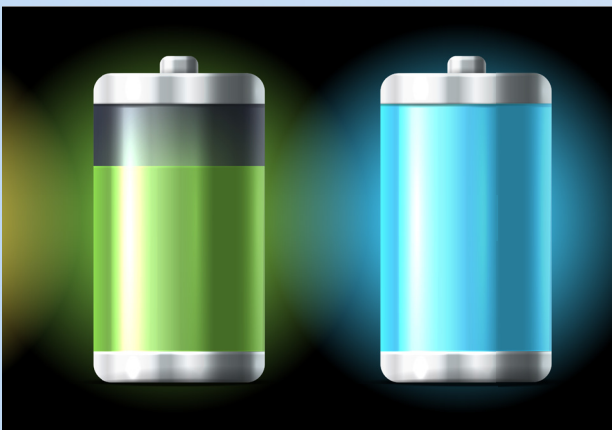

SCHEDULING SERVICES

In recent years, utility-scale solar power plants have been built on in increasingly large measure in our country. With our partners, we provide comprehensive scheduling services for weather-dependent renewable energy producers that function commercially or in a feed-in tariff system. The service includes the assumption of the balancing energy costs, the assumption of various official data supply, the related professional support and the monitoring of the power plant's energy production.

ENERGY STORAGE

The topic of energy storage has become more and more important in the continuously changing energy market. In cooperation with our partners, we provide household and utility-scale energy storage facilities to answer these challenges. We offer solutions that can help in the energy supply of smaller properties or companies, and that are suitable for providing complex services in the industry, as well as balancing services in the Hungarian electricity system. The capacity of our systems can be increased from 10 kWhs up to 100 MWhs.

ENERGY TRADING

Together with our partners, we provide an energy trading service for commercial power plants, which includes the trading of the produced electricity, as well as the related services of the balancing group, the scheduling and the administration. In addition, we also undertake the trading of the guarantees of origins on auctions or to our partners.

BALANCING SERVICES

Through our balancing energy services, we help to reduce the burden of the electricity grid with complex solutions. As a result, the energy producer receives an additional payment for the balancing energy. This possibility can generate extra income also for commercial production units and power plants functioning in feed-in tariff system.
